

Machine Learning Engineer

Internet Memory Research is seeking machine learning engineer to work on solving classification and prediction problems for developing our own B2B and B2C e-marketing solutions. Your primary focus will be problem cracking using ML techniques on our big data coming in various flavors – graph data, written natural language.

IMR is a start-up company based in Paris, France. It has a background in developing technologies for large-scale web crawling, archiving and analytics that uses as a basis for its own e-marketing B2B and B2C solutions. IMR is running its own computing infrastructure in its own datacenter hosting PBs of web crawled archives. The IMR team is multi-cultural and communicating in English and French. IMR is also currently involved in two H2020 research projects co-funded by the EU commission.

Requirements:

- Ph.D. or engineer's degree in Machine Learning, Data Mining, Statistics, Applied Mathematics, or a related field.
- Strong background in machine learning with domain knowledge and experience in the following areas: data-driven statistical modelling, graphical models, feature extraction and analysis, supervised learning.
- A big plus is knowledge and experience with Deep learning approaches and frameworks
- Good knowledge of Python and Java
- A plus is distributed computing experience (at least one of Hadoop, Spark, Flink)
- Experience with large datasets
- Skilled at data visualization and presentation
- Unix/Linux systems knowledge on a user level
- Autonomous, team player
- Good knowledge of English

What we offer:

- Work with open source cutting edge technologies on wide variety of projects
- Competitive salary based on experience, skills, and qualifications
- Young and dynamic team
- Agile/Scrum development methodology
